Project Title: Real-Time Learning Analytics Dashboard (LAD) for Kenyan TVET Institutions (CBET-Aligned)

Company Overview

Regisam Technologies is a Kenyan-based software development firm specializing in education technology solutions, custom web applications, and data-driven tools for the TVET sector. We deliver affordable, scalable, and impactful digital products tailored to local needs, supporting Kenya's Competency-Based Education and Training (CBET) transition.

Project Description

We will develop a full-stack web-based Learning Analytics Dashboard (LAD) to enable real-time instructional monitoring, competency tracking, early warnings, and evidence-based decisions in Kenyan TVET institutions.

Key Features (MVP Scope)

- Real-time performance monitoring and progression trends
- Competency heatmaps (color-coded mastery views)
- Attendance-performance correlation analytics
- Cohort and class-level analytics
- Automated early-warning alerts
- Digital Portfolio of Evidence (PoE) tracking
- Interactive visualizations (charts, graphs, dashboards)
- Real-time data integration (e.g., KoboToolbox, Power BI APIs)

- Trainer-centric, mobile-responsive interface
- Individual student progress tracking

Technology Stack

Backend API: Flask (Python) – RESTful services, logic, alerts, and integrations

Frontend: React – dynamic and responsive interface

Database: PostgreSQL – secure learner data and competency storage

Development Timeline

Total Duration: 2 Months (8 Weeks)

- Month 1: Backend API development, database schema, core logic, integrations, and initial frontend setup
- Month 2: React dashboard development, visualizations, full integration, testing, client feedback, and final delivery

Deliverables

- Complete source code (Flask backend + React frontend + PostgreSQL scripts)
- Basic setup & installation documentation
- User manual for trainers/administrators
- Final tested MVP application ready for client-hosted deployment

Exclusions

- Hosting, server setup, domain registration, SSL certificate, or cloud infrastructure
- Production deployment
- Ongoing maintenance, updates, or support (available separately)
- Additional features beyond agreed MVP scope

Total Development Fee

KSh 45,000 (Forty-Five Thousand Kenyan Shillings only) – Fixed price for full development (hosting not included).

Payment Terms

- 30% Upfront: KSh 13,500 – Upon project kick-off and requirements agreement
- 40% Mid-Project: KSh 18,000 – Upon completion of backend + frontend prototype
- 30% Final: KSh 13,500 – Upon final approval and full source code handover
